# Monthly Summary

- 1.1.1 This Summary Report is published in fulfilment of commitments detailed in the High Speed Rail (London-West Midlands) Environmental Minimum Requirements, Annex 1: Code of Construction Practice, for the nominated undertaker to present the results of air quality and dust monitoring undertaken in Lichfield District Council (LDC) during April 2026.
- 1.1.2 Figures 1 and Figure 2 in Appendix A presents the current worksites together with the dust monitoring locations.
- 1.1.3 This summary should be read in conjunction with the overview monitoring report monthly available from [www.gov.uk/government/collections/monitoring-the-environmental-effects-of-hs2](http://www.gov.uk/government/collections/monitoring-the-environmental-effects-of-hs2), which highlights: the applicable standards and guidance, as well as the air quality and dust monitoring methodologies to be implemented by nominated undertakers throughout construction.
- 1.1.4 The current worksites, as presented in Appendix A, Figures 1 and 2, include:

## **Sublot 8.1**

### Whittington Common Cutting

- No BBV works took place during April 2026.

### Swinfen Cutting South

- Construction of A5 overbridge and associated works.

## **Sublot 8.2**

### Streethay Area 1 works

- Excavation and pile cropping.

### Streethay Area 6 works

- Road works: road build up, asphalt installation, drainage works, footpath and VRS construction, sheet pile removal and utilities exposure works.

### Streethay Area 7 works

- Piling works.

## **Sublot 8.3**

### Streethay Area 1 works

- Excavation and pile cropping.

#### Streethay Area 6 works

- Road works: road build up, asphalt installation, drainage works, footpath and VRS construction, sheet pile removal and utilities exposure works.

#### Streethay Area 7 works

- Piling works.

- 1.1.5 Eight (8) dust monitors are installed around these worksites, where works are underway. These sites returned a low to medium dust risk rating.
- 1.1.6 Dust monitoring locations and results are presented in Appendix B, Table 1, together with line charts of monthly data from the dust monitors presented in Figure 3. All continuous dust monitoring is undertaken using indicative monitors. Despite being Environment Agency (MCERTS) certified, indicative monitors carry a higher level of uncertainty than reference monitors, and therefore cannot be strictly compared with Air Quality Standards for human health and the environment. The purpose of the monitoring undertaken is to ensure the effectiveness of the on-site mitigation.
- 1.1.7 The trigger level for PM<sub>10</sub> concentrations of 190 µg/m<sup>3</sup>, over a 1-hour period, in accordance with the updated guidance document '*Guidance on Monitoring in the Vicinity of Demolition and Construction Sites – (October 2018)*' has been applied.
- 1.1.8 No (0) dust trigger alerts were recorded during the monitoring period (April 2026).
- 1.1.9 There were no (0) complaints received during the reporting period (April 2026).
