## Amendment record

JSP 815 has been updated as a part of Defence Reform and will be subject to further scheduled reviews and updated as required.

This Element has been reviewed by the Directorate of Defence Safety & Support (DDSS) together with relevant subject matter experts and key Safety stakeholders. Any suggestions for amendments should be sent to [People-DDS-GroupMailbox@mod.gov.uk](mailto:People-DDS-GroupMailbox@mod.gov.uk).

| Version No | Date      | Text Affected                                                | Authority |
|------------|-----------|--------------------------------------------------------------|-----------|
| 1.0        | Dec 22    | BETA version for consultation                                | Dir HS&EP |

| 1.3        | 1 Sep 26  | Scheduled revision and Defence Reform update                 | Dir-DSS   |

## Terms and definitions

The term 'Defence Area' refers to one of the four top-level areas of Defence: Department of State (DOS), Armed Forces (MSHQ and Military Commands), National Armaments Director (NAD) Group and the Defence Nuclear Enterprise (DNE). Within Defence Safety Policy (JSP 815, JSP 375 and JSP 376), reference to a 'Defence Area' responsibility applies to the top-level Defence Area however, for the Armed Forces it also applies to their component Military Commands (Army, Air, Navy and CSOC).

General safety terms and definitions are provided in the [Master Glossary of Safety Terms and Definitions](#) which can also be accessed on [GOV.UK](#).

## **Must and should**

Where this Element says must, this means that the action is a compulsory requirement.

Where this Element says should, this means that the action is not a compulsory requirement but is considered good practice.

## **Introduction**

1. This Element provides the direction that must be followed and the guidance and good practice that should be followed and will assist users to comply with the expectations for communication and stakeholder engagement. This Element also aims to explain the importance of communications and stakeholder engagement which at the highest level is set out in the [Defence Safety Operating Model](#).

## **Purpose and expectations**

2. This Element focuses on the mechanisms the Defence Area has in place to identify its internal and external stakeholders and communicate and engage with these stakeholders on safety matters.

## **Identification of stakeholders**

3. Defence Areas must identify the stakeholders who are impacted by its activities and understand their needs and expectations. This should inform the design of the Defence Area's safety management arrangements and their stakeholder engagement planning.

4. A stakeholder mapping exercise to consider their influence and impact is an effective way to prioritise stakeholder engagement for Defence Areas and assist them to develop a 'communications and engagement plan.' The plan should be reviewed and updated as appropriate and should consist of:

- a. a set of communication and engagement objectives that are agreed with key stakeholders and approved by senior leaders;
- b. a stakeholder map, identifying target stakeholders / audiences, their information needs, and the methods / channels for communications and engagement;
- c. an actively managed forward-plan of tactical activity to deliver against the specific objectives; and
- d. a method of evaluating the impact / success of the communication and engagement activities (ideally with metrics), the findings should be acted on to improve delivery against objectives and increase audience satisfaction / participation.

5. Defence Areas should understand and fulfil their legal obligations and regulatory requirements with regards to safety stakeholder engagement and communication which should be clearly identified and understood at every level of the area. The law sets out how an organisation is to consult its employees on safety matters in different situations and the choices it is required to make.

6. The [Health and Safety Executive \(HSE\) Guidance](#) (INDG232), provides guidance on the employer's duty to consult their workforce with regards to safety issues and there are two general regulations and they are:
- a. [The Safety Representatives and Safety Committees Regulations 1977](#)
  - b. [The Health and Safety \(Consultation with Employees\) Regulations 1996<sup>1</sup>](#)

## **Stakeholder engagement**

7. Defence Areas should understand the influence that internal and external stakeholders have on their area's activities and as such they should establish, implement, and maintain a process for stakeholder engagement and consultation which should include:

- a. Providing mechanisms, time, training, and the resources necessary for consultation and participation.
- b. Providing timely, clear, understandable, accessible, and relevant information about their safety management arrangements.
- c. Determining and removing obstacles or barriers to participation and minimise those that cannot be removed.
- d. Making all stakeholders aware of their roles with respect to communication on safety matters.
- e. Emphasise the consultation of personnel at all levels including Employee Networks and particularly those carrying out the work activities (or those that are impacted by it) on the following:
  - (1) determining the needs and expectations of interested parties;
  - (2) understanding relevant safety legislation, policy and regulations;
  - (3) assigning organisational roles, responsibilities, and authorities, as applicable;
  - (4) determining how to fulfil legal requirements and other requirements;
  - (5) establishing safety objectives and planning to achieve them;
  - (6) determining applicable controls for outsourcing, procurement and contractors;
  - (7) determining what needs to be monitored, measured and evaluated;
  - (8) planning, establishing, implementing, and maintaining an audit programme; and
  - (9) ensuring continual improvement.
- f. Emphasise the participation of the workforce in the following:
  - (1) determining the mechanisms for their consultation and participation;
  - (2) identifying hazards and assessing safety risks and opportunities;

---

<sup>1</sup> The 1996 regulations only apply to workforces that are not covered by TU recognition.

- (3) determining actions to eliminate hazards and reduce safety risks;
- (4) determining competence requirements, training needs, training and evaluating training;
- (5) determining what needs to be communicated and how this will be done;
- (6) determining control measures and their effective implementation; and
- (7) investigating safety occurrences and nonconformities and determining corrective actions.

8. Defence Areas must engage with the Director Defence Safety and Support (Dir-DSS) and the Director General Defence Safety Authority (DG DSA) on specific safety issues that may prevent the Defence Area from complying with safety legislation and / or Defence policy or regulations. Defence Areas should also engage with the Dir-DSS and DG DSA where they have identified safety risks and issues that may have a Defence level impact.

## **Consultation**

9. The Dir-DSS has established the Defence Safety Function Delivery Group (FDG) and Safety Leadership Group (SLG) to consider and address pan-Defence strategic safety issues. Defence Areas are to support the work of these groups and to make sure that suitable representatives are members of these groups, and that attendance is not delegated (unless in exceptional circumstances). Defence Areas can use these forums to raise awareness of safety risks, issues and challenges affecting their own organisation and share good practice and lessons learned to help drive continuous improvement in safety across Defence.

10. Defence Areas are to establish their own hierarchy of safety boards, committees, forums and meetings for maintaining awareness of current and potential future safety issues by discussing all the [key safety topics](#) such as risks, accidents, incidents, near misses and so on. The Dir-DSS should be invited to Defence Area safety committee meetings, in line with the letters of delegation from the Permanent Under Secretary.

11. Defence Areas are consulted on all safety policy reviews and updates through the FDG or specific policy review groups led by the Directorate of Defence Safety & Support (DDSS). Defence Areas are to provide appropriate resources (often those with subject matter expertise) to assist with the development of new or to review and update existing safety policy. The Defence Area's permanent SLG / FDG members are responsible for the coordination of responses to safety policy consultation within their organisation and to provide the final approval on behalf of their Area.

12. Consultation is a two-way process, so as well as making sure that safety direction and guidance is communicated to all levels of the organisation by senior leaders, Defence Areas should encourage all personnel to raise concerns and to influence decisions on managing safety across the organisation and more widely across Defence.

## **Consulting with Trades Unions**

13. Defence Areas should understand and meet their legal obligation to consult with recognised Trades Unions (TUs) or relevant staff associations and representatives on safety issues concerning civilian staff and when developing their organisational level safety policy. Defence Areas should ensure that relevant meetings and forums with the TUs are established at organisation and site level.

14. The Dir-DSS co-chairs the Defence Joint Health and Safety Committee (JHSC) with the TUs lead representative. The JHSC is a forum for discussing matters relating to the safety at work and welfare of the civilian workforce at a corporate level between the MOD Trades Unions (TU side) and the MOD safety management (management side). It does not cover wider employment issues beyond safety and welfare in the workplace such as staff reporting, performance or pay.

15. The JHSC meets twice a year, however extraordinary meetings could be called at short notice if the JHSC members or Dir-DSS deems a situation requiring discussion to be serious and urgent enough. The scope of the JHSC is to provide the opportunity for dialogue, cooperation, and support where cross-cutting Defence wide safety issues impact the civilian workforce.

16. Defence Areas must establish JHSC's or equivalent fora at the Defence Area level and to consider whether there are Defence wide safety issues with significant cross-cutting implications that need to be raised to the Defence level JHSC.

## **Communications**

17. The communication process established by Defence Areas should include gathering, updating, and disseminating information in an accessible manner, especially with regards to safety risks. Safety campaigns should include positive reinforcement and innovation to drive continual improvement in safety risk management as well as using alerts and directives for the Defence Area, wider Defence and for contractors, and the supply chain where appropriate.

18. Defence Areas must consider all communication methods and make sure that they are fully accessible to all relevant stakeholders, personnel, and interested parties.

19. Defence Areas must lead on safety related secretariat and communications that are specific to their organisation, but they must engage with the Dir-DSS and the DG DSA where responses or communications are for cross-cutting Defence wide issues, this is to make sure that a consistent message is provided. These may include:

- a. Communications - such as the issuing of safety notices, safety campaigns, dealing with the press, announcements for the release of new safety policy documents.
- b. Secretariat - such as safety related ministerial briefings, responses to parliamentary questions or enquiries and freedom of information requests.

## **Raising safety concerns**

20. Defence Areas should have a process in place to enable safety concerns to be reported and for appropriate actions to be taken, including anonymous reporting. These are in addition to the reporting of safety occurrences set out in [Chapter 16](#) - Safety occurrence reporting and investigation of JSP 375, Volume 1. The process should have clear sequential steps to follow until the issue is resolved or addressed at an appropriate level within the Area's chain of command.

21. If anybody within a Defence Area has any safety-related concerns, then in the first instance they should raise these with their commander, manager or local safety rep and then, if necessary, with their relevant Defence Area Safety Centre or equivalent.

## Elevation process

22. If a safety-related concern has been identified, the following steps should be followed sequentially:

- a. concern is raised, ideally first with the individual's direct manager or military commander, or if they are not available then the local safety adviser;
- b. the activity in question should cease until the matter is resolved (unless in exceptional circumstance for example combat operations);
- c. once action has been taken, those involved (including the person who has raised the concern) should consider if sufficient assurance and evidence show that the activity has been made safe, or the risk has been satisfactorily responded to. If this is not the case, the concern should be elevated to the next level in the chain of command, the accountable person responsible for the activity or the establishment, unit, platform or site;
- d. if necessary, an appeal can be made to the Defence Area Safety Centres, Chief Environment and Safety Officer (CESO), or equivalents; and
- e. unresolved concerns concerning civilian staff can be taken to the Defence Area's safety committee, or if they are at a Defence level, to the JHSC.

23. Throughout the elevation process, records should be maintained to provide an audit trail of decision making and rationale. All decisions should be proportionate to the severity of the concern, they should be expeditious and responded to in a period of days rather than weeks.

24. Where appropriate, there should be a mechanism in place for sharing safety concern information internally, and with wider Defence if the issue has wider safety implications. Defence Area leaders should make every effort to remove any obstacles or barriers (or minimise those that cannot be removed) that have been identified which may prevent personnel raising safety concerns.

25. If any individual feels that their concern is not being taken seriously or is not being adequately addressed, then they are able to use the MOD's whistleblowing and raising a concern process which can be found on the Defence Intranet, or the following contact details:

- a. telephone – 0800 161 3665 (STD) or +44 1480 446 380 (Overseas)
- b. e-mail – [Confidential-hotline@mod.gov.uk](mailto:Confidential-hotline@mod.gov.uk)

26. All concerns should be handled responsibly, professionally and in a positive manner. The MOD will not tolerate the victimisation of anyone raising a concern and robust action will be taken against anyone found to be responsible for such actions. Further information on raising complaints is set out in [JSP 763 - The MOD Behaviours and Informal Complaints Resolution Policy](#).

## Element assurance framework

27. The focus of this Element requires that Defence Areas have mechanisms in place to identify their internal and external stakeholders and communicate and engage with these stakeholders on safety matters. The expectations and the performance statements for this Element are set out in the following pages.

# Element 11: Communications and Stakeholder Engagement

### The Expectations in this Element are:

**E11.1** The Defence Area has mechanisms in place to identify internal and external stakeholders and understand their role and purpose in safety matters.

**E11.2** The Defence Area has mechanisms in place to manage and engage with stakeholders and to consult on safety matters, including with the workforce, Trades Unions, suppliers, contractors, and others affected by the organisation's activities.

**E11.3** The Defence Area collaborates with its stakeholders to build effective working relations to drive continual improvement in safety.

**E11.4** The Defence Area has mechanisms in place to allow all people, contractors, and the supply chain to easily access up to date safety information relevant to their roles.

**E11.5** The Defence Area has mechanisms in place to enable people to anonymously raise safety related concerns.

### Documents often associated with this Element:

- 1LOD assurance reports
- Agenda and minutes of the safety committee meetings (Strategic, Tactical and Working)
- Strategic Plan
- Communications plan
- Continual Improvement (CI) logs
- Corrective action plans
- Correspondence with regulators
- Correspondence with Regulators, Other government departments or MoD organisations regarding safety concerns or knowledge sharing
- Defence Area business plans
- Defence Area Operating Model
- Defence Area safety management arrangements
- Joint Basing Arrangements (JBAs)
- Memorandums of Understanding (MOUs)
- RACI (Responsible, Accountable, Consulted, Informed) matrix
- Service Level Agreements (SLAs)

**Expectation 11.1** The Defence Area has mechanisms in place to identify internal and external stakeholders and understand their role and purpose in safety matters.

| Unsatisfactory                                                                                                                                                                                                                                       | Limited                                                                                                                                                                                                                    | Moderate                                                                                                                                                                                                                     | Substantial                                                                                                                                                                                                                                                    |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <ul style="list-style-type: none"> <li>There is little or no evidence to demonstrate that the Defence Area has mechanisms in place to identify internal and external stakeholders or understand their role and purpose on safety matters.</li> </ul> | <ul style="list-style-type: none"> <li>The Defence Area has mechanisms in place to identify some stakeholders, however there is limited understanding and communication and engagement with these stakeholders.</li> </ul> | <ul style="list-style-type: none"> <li>The Defence Area has mechanisms in place to identify its internal and external stakeholders and their roles are understood.
