Subject: Proposed planning application PCU/RARE/C3105/3378843 Site A Piddington Depot Bicester Asylum housing
Date: 04 September 2026 11:16:51

This Site seems to make no consideration for EMF Radiation from 400,000 volt 24x power cables 2x Pylons on this site with health concerns owing to very close proximity covering the Asylum Housing Area a study in the 1990s raised serious health concerns for EMF Radiation corona ions being made airborne from power lines being carcinogenic possibly absorbed into Lungs and Skin . As the ECHR Human Rights Act Article 2 states the UK Government has a Positive Duty Prevent Forseable Loss of Life as in this case DNA Damage to housed staff and migrants who will occupy this site on a 24/7 basis giving these people a very concentrated exposure to this health hazard on this site. This location should be abandoned as a migrant centre for this health hazard alone not even considering the other hazards of other carcinogenic dust micro particles ie. Asbestos etc etc from over a hundred years of military storage and burn pits at this location.
