Planning Application PCU/RARE/C3105/3378843

We object to the above planning application for the following reasons.

Electricity Supply: according to the planning application the condition of the electrical network is unknown and the capacity has not been verified. Due to this, the applicant intends to use temporary and permanent generators to meet demand for 1256 service users. These presumably will rely on diesel to power them which obviously flies in the face of government emission targets. During construction and operation this would involve increases in vehicle movement adding to the increase in the co2 footprint.

To summarise, we think the increased pollution and road traffic movement and the significant amount of diesel needed to power the site are reasons to object to these proposals.

Would you please acknowledge receipt of this objection which was sent on 7th September 2026. We'd like to be kept informed about what happens next.
