Public sector finances, UK: October 2026

How the relationship between UK public sector monthly income and expenditure leads to changes in deficit and debt.

1. Overview

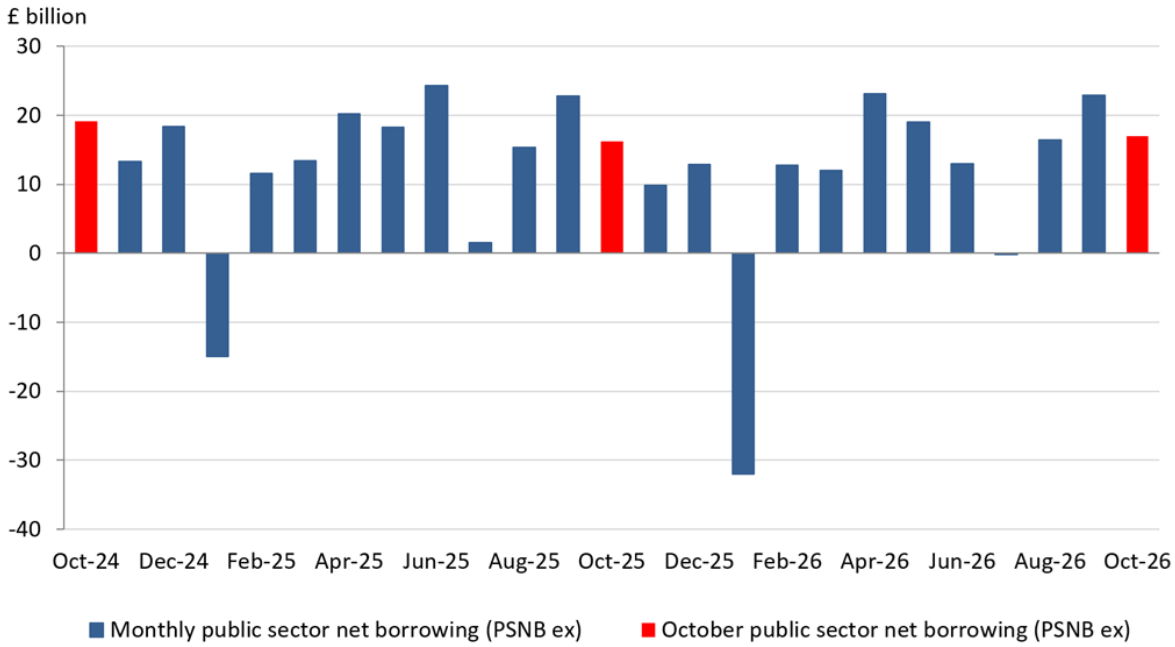

Borrowing in October 2026 was slightly higher than last year, as public spending grew by more than income, partly because of higher debt interest costs.

Despite the increase in October, borrowing in the financial year to date remained lower than over the same period last year.

Debt continued to rise in cash terms, having passed £3 trillion for the first time in September 2026, and remained historically high as a proportion of the economy.

Figure 1: The UK borrowed £17.0 billion in October 2026, up £0.8 billion on the same month last year

Public sector net borrowing, £ billion, UK, October 2024 to October 2026

Source: Public sector finances from the Office for National Statistics
Notes:
1. Dataset identifier code: -J5II.
2. Figures exclude those banks classified to the public sector between October 2007 and May 2024.
3. Positive numbers indicate a deficit, while negative numbers indicate a surplus.
4. Each January usually records a surplus because of additional self-assessed income tax receipts.

Public sector net borrowing

- Borrowing – the difference between total public sector spending and income – was £17.0 billion in October 2026; this was £0.8 billion (5.2%) more than in October 2025.
- Central government debt interest payable was £11.2 billion in October 2026; this was £2.8 billion (33.4%) more than in October 2025.
- Borrowing was £111.3 billion in the financial year (FY) to October 2026; this was £7.3 billion (6.1%) less than in the same period last year.
- Borrowing in the FY to October 2026 was 3.5% of gross domestic product (GDP), 0.3 percentage points lower than in the same period last year but the 14th highest April-to-October figure since monthly records began in 1993.

Public sector current budget deficit

- The current budget deficit – borrowing used to fund day-to-day public sector activities – was £11.9 billion in October 2026, bringing the total in the FY to October 2026 to £72.9 billion; this was £8.6 billion (10.5%) less than in the same period last year.

Public sector net debt

- Public sector net debt – the amount owed to the UK private sector and overseas, less liquid assets – was provisionally estimated at £3,058.3 billion (£3.1 trillion) at the end of October 2026, £161.6 billion more than last year.
- Debt at the end of October 2026 was equivalent to 95.8% of GDP, 1.9 percentage points higher than last year and at levels last seen in the early 1960s.

Public sector net financial liabilities

- Public sector net financial liabilities – a wider balance sheet measure than net debt, which includes additional financial assets and liabilities – were provisionally estimated at £2,696.2 billion (£2.7 trillion) at the end of October 2026, £162.3 billion more than last year.
- Net financial liabilities were 84.5% of GDP at the end of October 2026; this was 2.4 percentage points higher than last year but 11.3 percentage points lower than net debt, as the additional financial assets included exceed the additional financial liabilities.

Central government net cash requirement

- Central government net cash requirement (excluding UK Asset Resolution Limited and Network Rail Limited) – the additional cash needed to be raised from the financial markets to finance activities – was £15.5 billion in October 2026; this was £6.2 billion (28.5%) less than in October 2025.

2. Borrowing in October 2026

Public sector borrowing was £17.0 billion in October 2026. This was the third-highest October borrowing since monthly records began in 1993, behind those of 2024 and 2020 (not adjusted for inflation). This was £0.8 billion (5.2%) higher than last year and £0.8 billion above the March 2026 Office for Budget Responsibility (OBR) forecast.

Table 1: Public sector net borrowing monthly summary

Public sector net borrowing by subsector October 2026 compared with October 2025, £ billion, UK

Subsector	October 2026 (£ billion)	October 2025 (£ billion)	Difference (£ billion)	Difference (%)
Central government net borrowing	20.8	20.9	-0.1	-0.4
Local government net borrowing	1.2	1.4	-0.2	-17.4
Total public corporations net borrowing	-4.9	-6.1	1.2	19.3
Of which: non-financial public corporations	-0.2	-0.3	0.1	25.4
Of which: funded public sector pensions	-0.2	-0.1	-0.1	-184.0
Of which: Bank of England	-4.5	-5.8	1.3	21.7
Public sector net borrowing	17.0	16.2	0.8	5.2
Memo item: Public sector current budget deficit	11.9	11.6	0.2	1.7
Memo item: Central government net cash requirement [note 2]	15.5	21.7	-6.2	-28.5

Notes

1. Figures may not sum because of rounding.
2. Figures exclude Network Rail Limited and UK Asset Resolution Limited.
3. A breakdown of net borrowing by subsector and a summary of central government receipts and expenditure data are presented in Tables 1 to 3 in our Public sector finances summary tables: Appendix M dataset.
4. Data for both funded public sector pensions and the Bank of England are highly provisional and rely partly on data published annually.

Our Public sector finances borrowing by subsector: Appendix R dataset provides further detail on data presented in Table 1 and includes the option to select other time periods.

Figure 2: The public sector spent £17.0 billion more in October 2026 than it received in taxes and other income
The determinants of public sector net borrowing, £ billion, UK, October 2024 to October 2026

Source: Public sector finances from the Office for National Statistics
Notes
1. Dataset identifier codes: KX5Q, -JW2O and -J5II.
2. Figures exclude those banks classified to the public sector between October 2007 and May 2024.
3. In this presentation spending is shown as positive and receipts shown as negative.
4. Each January usually records a surplus because of additional self-assessed income tax receipts.

! Our initial estimates of borrowing for the most recent months are susceptible to revisions in later months. Estimates of public corporations' data including those of Bank of England and public sector pensions are highly provisional estimates.

Central government borrowing

Central government is the largest subsector of the public sector and the main contributor to monthly public sector borrowing.

Despite higher tax receipts, central government borrowing was £20.8 billion in October 2026, broadly unchanged from last year, when it was £0.1 billion higher.

The latest estimate is provisional and may be revised as more data become available.

Central government receipts

Central government receipts were £93.6 billion in October 2026. This was £6.7 billion higher than in October 2025, with income-related taxes making the largest contribution to this increase.

Table 2: Central government receipts monthly summary

October 2026 compared with October 2025, £ billion, UK

Receipt category	October 2026 (£ billion)	October 2025 (£ billion)	Difference (£ billion)	Difference (%)
Value Added Tax	18.8	18.1	0.7	3.8
Income-related taxes	24.7	21.8	3.0	13.6
Corporation Tax	9.6	8.9	0.8	8.5
Other central government taxes	16.2	15.7	0.5	3.2
Total central government taxes	69.4	64.5	4.9	7.6
National Insurance Contributions [note1]	17.9	16.4	1.5	9.1
Other central government income	6.3	6.0	0.3	4.9
Total current central government receipts	93.6	86.9	6.7	7.7

Source: Public sector finances from the Office for National Statistics

Notes

1. National Insurance Contributions are the principal component of Compulsory Social Contributions.
2. Figures may not sum because of rounding.
3. Some of our tax estimates are partially based on OBR forecasts.

The forecasts underlying our current tax estimates reflect the expectations published in the Economic and fiscal outlook – March 2026 report from the Office for Budget Responsibility (OBR).

Our Public sector current receipts: Appendix D dataset provides a detailed breakdown of central government income.

Central government current expenditure

Central government current expenditure was £99.3 billion in October 2026. This was £7.0 billion higher than in October 2025, with increases spread across spending on debt interest, public services, social benefits and other costs.

Table 3: Central government spending monthly summary
October 2026 compared with October 2025, £ billion, UK

Expenditure category	October 2026 (£ billion)	October 2025 (£ billion)	Difference (£ billion)	Difference (%)
Central government interest payable [note 2]	11.2	8.4	2.8	33.4
Central government net social benefits [note 3]	29.3	27.7	1.7	6.0
Central government spending on goods and services [note 4]	40.5	38.6	1.9	5.0
Central government current transfers to local government [note 5]	12.9	12.4	0.5	4.2
Other central government current spending	5.5	5.3	0.1	2.4
Total central government current expenditure	99.3	92.3	7.0	7.6
Central government net investment	11.1	11.8	-0.7	-5.6
Central government depreciation	3.9	3.7	0.2	6.1
Total central government expenditure	114.4	107.8	6.6	6.1

Source: Public sector finances from the Office for National Statistics
Notes
1. Figures may not sum because of rounding.
2. Central government debt interest payable rises and falls with movements in the Retail Prices Index (RPI), adding volatility to monthly debt interest costs.
3. Movements in net social benefits paid by central government are largely caused by inflation-linked increases in many benefits, and earnings-linked increases to State Pension payments.
4. Central government departmental spending on goods and services includes pay and the cost of delivering public services, both of which are affected by inflation.
5. Payments to support the day-to-day running of local government are intra-government transfers, recorded as offsetting central government expenditure and local government income, with no impact on overall public sector borrowing.

Central government debt interest costs

Central government borrowing is mainly financed by gilts issued by the Debt Management Office. The UK government then pays interest to the investors who hold these gilts.

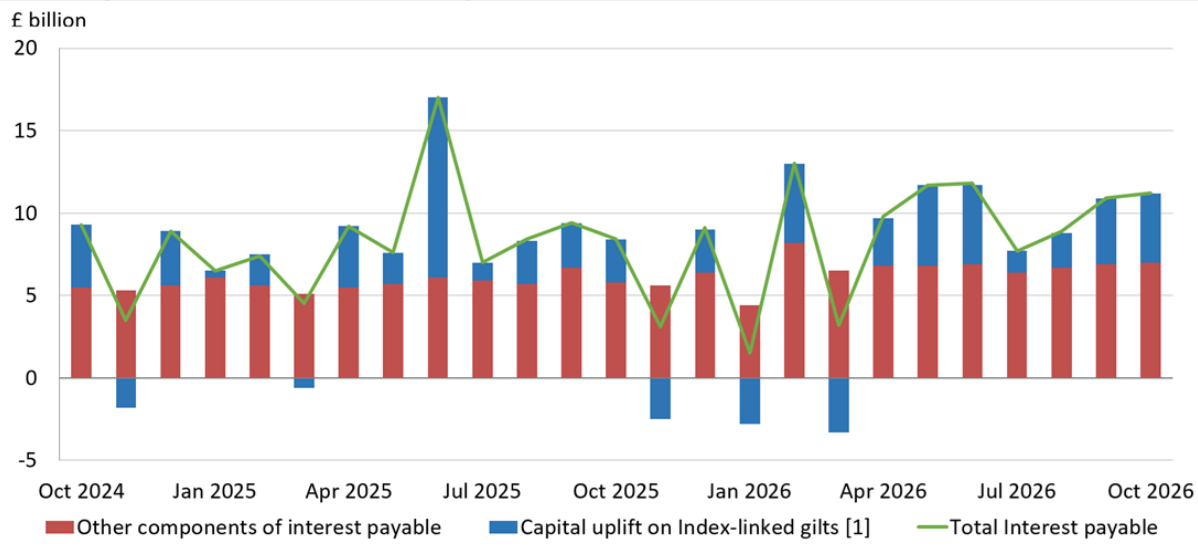

Central government debt interest payable was £11.2 billion in October 2026, £2.8 billion more than in October 2025. This was the highest October figure since monthly records began in 1997 and only the ninth month on record in which interest payable exceeded £10.0 billion. These figures are not adjusted for inflation.

Interest payable on index-linked gilts changes with the Retail Prices Index (RPI), which can make monthly debt interest costs volatile. Of the £11.2 billion payable in October 2026, £4.2 billion was the inflation-related uplift on index-linked gilts. This mainly reflected the 0.6% increase in the RPI between July and August 2026.

The inflation-related uplift builds up over the life of an index-linked gilt and is paid when the gilt is redeemed. Figure 3 shows this uplift in light blue as it is accrued rather than when it is paid.

Figure 3: Recent movements in the Retail Prices Index added £4.2 billion to central government debt interest payable in October 2026

Central government debt interest payable, £ billion, UK, October 2024 to October 2026

Source: Public sector finances from the Office for National Statistics
Notes
1. Net of redemption proceeds.
2. Dataset identifier codes: NMFX, JNYY and JNYX.

Central government current budget deficit

The central government current budget deficit was £9.7 billion in October 2026, £0.6 billion more than in October 2025. This is the amount central government needed to borrow to fund day-to-day activities.

The deficit is the difference between £99.3 billion of current expenditure and £93.6 billion of current receipts, after accounting for £3.9 billion of depreciation.

The current budget balance excludes borrowing for capital investment. It shows whether current receipts are enough to cover day-to-day public services, welfare and administration. Our Public sector finances borrowing by subsector: Appendix R dataset presents central government current budget deficit as a component of the total public sector current budget deficit. It also provides an additional breakdown of its components.

One of the government's fiscal objectives is to achieve a surplus in the public sector current budget by the financial year ending March 2030. Further information is provided in Section 6: UK fiscal targets.

Central government net investment

Central government net investment was £11.1 billion in October 2026, £0.7 billion less than in October 2025. This includes £5.2 billion transferred from HM Treasury to the Bank of England (BoE) Asset Purchase Facility (APF) Fund.

The quarterly payment from HM Treasury to the APF Fund was £1.5 billion lower in October 2026 than in October 2025. These transfers are intra-public sector transactions and, therefore, do not affect overall public sector borrowing, as they are recorded simultaneously as central government expenditure and as income received by the BoE.

Comparing our October 2026 borrowing estimates with official forecasts

The Office for Budget Responsibility (OBR) publishes the UK government's official economic and fiscal forecasts twice a year.

The latest OBR forecast was published in its Economic and Fiscal Outlook – October 2026 report on 28 October 2026. However, the corresponding monthly forecast profiles are not yet available, so we are unable to compare the latest monthly public sector finance estimates with this forecast.

Until these profiles are available, we will continue to compare our estimates with the OBR's Economic and fiscal outlook – March 2026 report, published on 3 March 2026, using the associated monthly profiles released in April 2026. We will update our comparisons as soon as the October 2026 monthly profiles become available.

Public sector borrowing in October 2026 was £0.8 billion higher than the March 2026 OBR monthly forecast, mainly because central government borrowing was higher than forecast.

Table 4: Comparing our October 2026 estimates with the corresponding OBR forecasts

Latest public sector finances estimates compared with the corresponding Office for Budget Responsibility forecast, UK, £ billion

Oct-26	ONS estimate	OBR forecast	Difference [note 3]
Central government total current receipts	93.6	91.3	2.3
Central government total expenditure	114.4	110.7	3.7
Central government net borrowing	20.8	19.4	1.4
Local government net borrowing	1.2	1.1	0.1
Total public corporations net borrowing [note 4]	-4.9	-4.2	-0.7
Public sector net borrowing	17.0	16.2	0.8
Memo item: Public sector current budget deficit	11.9	11.8	0.1

Source: Public sector finances from the Office for National Statistics

Notes

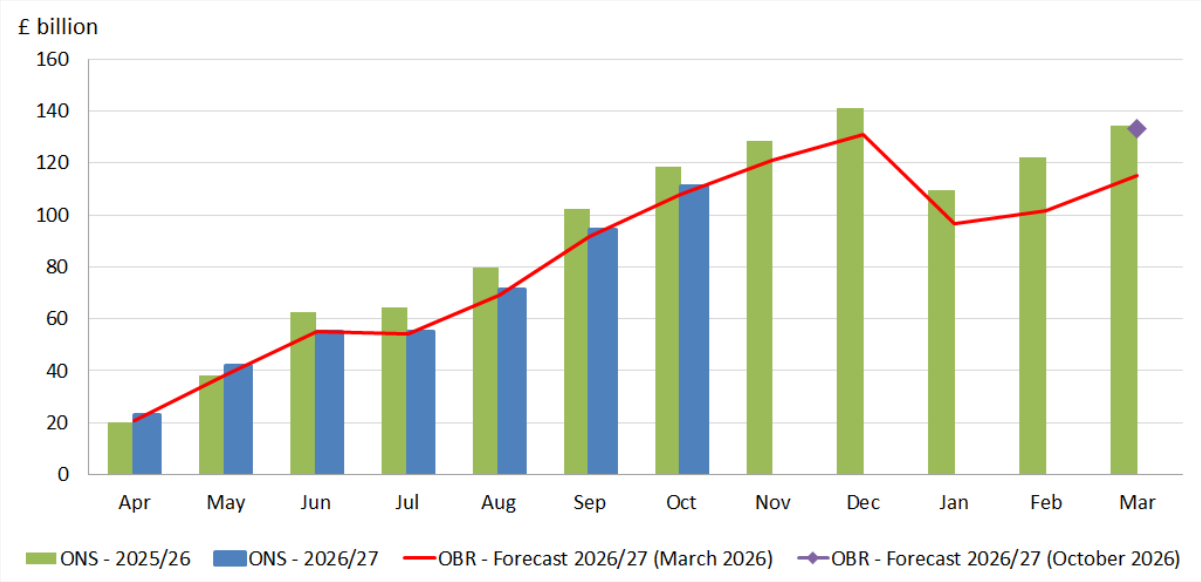

1. This table uses the Economic and fiscal outlook – March 2026 and the corresponding monthly profiles published in April 2026, as published by the OBR.
2. Year-to-date comparisons offer a more reliable view of overall trends, while monthly figures can be more prone to short-term forecast volatility.
3. Figures may not sum because of rounding.
4. Includes non-financial public corporations, funded public sector pensions and the Bank of England.

3. Borrowing in the financial year to October 2026

Borrowing in the financial year (FY) to October 2026 was £111.3 billion. This was £7.3 billion (6.1%) less than in the FY to October 2025 but £3.3 billion above the March 2026 Office for Budget Responsibility (OBR) forecast.

Figure 4: Borrowing in the financial year to October 2026 was lower than in the same period last year, but higher than the March 2026 OBR forecast

Cumulative public sector net borrowing, £ billion, UK

Source: Public sector finances from the Office for National Statistics and the Office for Budget Responsibility
Notes:
1. Dataset identifier code: -J5II.
2. Figures exclude those banks classified to the public sector between October 2007 and May 2024.
3. This chart uses forecast data published by OBR in both its Economic and fiscal outlook- March 2026 report and Economic and Fiscal Outlook – October 2026 report

Table 5: Public sector net borrowing financial year to date summary

Public sector net borrowing by subsector, financial year (FY) to October 2026 compared with the FY to October 2025, UK

Subsector	FY to October 2026 (£ billion)	FY to October 2025 (£ billion)	Difference (£ billion)	Difference (%)
Central government net borrowing	120.1	124.4	-4.3	-3.5

Source: Public sector finances from the Office for National Statistics
Notes
1. Figures may not sum because of rounding.
2. Figures exclude Network Rail Limited and UK Asset Resolution Limited.
3. A breakdown of net borrowing by subsector and a summary of central government receipts and expenditure data are presented in Tables 1 to 3 in our Public sector finances summary tables: Appendix M dataset.
4. Data for both funded public sector pensions and the Bank of England are highly provisional and rely partly on data published annually.

Our Public sector finances borrowing by subsector: Appendix R dataset provides further detail on data presented in Table 5 and includes the option to select other time periods.

Central government borrowing

Central government accounted for most of the borrowing in the FY to October 2026. Receipts increased by £4.3 billion more than expenditure, so central government borrowing was lower than in the same period last year.

Central government receipts and expenditure

Central government receipts were £650.0 billion in the FY to October 2026. This was £40.5 billion higher than in the same period last year, with income-related taxes making the largest contribution to this increase.

Table 6: Central government receipts financial year to date summary
Financial year (FY) to October 2026 compared with the FY to October 2025, UK

Receipt category	FY to October 2026 (£ billion)	FY to October 2025 (£ billion)	Difference (£ billion)	Difference (%)
Value Added Tax	128.6	121.8	6.8	5.6
Income-related taxes	181.3	167.4	13.9	8.3
Corporation Tax	66.5	57.6	8.9	15.5
Other central government taxes	112.2	107.8	4.3	4.0
Total central government taxes	488.5	454.5	34.0	7.5
National Insurance Contributions [note1]	117.8	112.8	5.1	4.5
Other central government income	43.7	42.3	1.4	3.3
Total current central government receipts	650.0	609.5	40.5	6.6

Source: Public sector finances from the Office for National Statistics
Notes
1. National Insurance Contributions are the principal component of Compulsory Social Contributions.
2. Figures may not sum because of rounding.
3. A detailed breakdown of central government income is presented in our Public sector current receipts: Appendix D dataset.
4. The forecasts underlying our current tax estimates reflect the expectations published in the Economic and fiscal outlook – March 2026 report from the Office for Budget Responsibility (OBR).

Central government current expenditure was £682.7 billion in the FY to October 2026. This was £32.5 billion higher than in the same period last year, with increases spread across spending on social benefits, public services, debt interest and other costs.

Table 7: Central government spending financial year to date summary
Financial year (FY) to October 2026 compared with the FY to October 2025, UK

Expenditure category	FY to October 2026 (£ billion)	FY to October 2025 (£ billion)	Difference (£ billion)	Difference (%)
Central government interest payable [note 2]	71.9	67.0	4.9	7.4
Central government net social benefits [note 3]	204.7	192.0	12.7	6.6
Central government spending on goods and services [note 4]	275.1	265.8	9.3	3.5
Central government current transfers to local government [note 5]	93.8	89.8	4.1	4.6
Other central government current spending	37.1	35.6	1.4	4.0
Total central government current expenditure	682.7	650.2	32.5	5.0
Central government net investment	60.2	58.2	1.9	3.3
Central government depreciation	27.2	25.5	1.7	6.7
Total central government expenditure	770.1	733.9	36.2	4.9

Source: Public sector finances from the Office for National Statistics
Notes
1. Figures may not sum because of rounding.
2. Central government debt interest payable rises and falls with movements in the Retail Prices Index (RPI), adding volatility to monthly debt interest costs.
3. Movements in net social benefits paid by central government are largely caused by inflation-linked increases in many benefits, and earnings-linked increases to State Pension payments.
4. Central government departmental spending on goods and services includes pay and the cost of delivering public services, both of which are affected by inflation.
5. Payments to support the day-to-day running of local government are intra-government transfers, recorded as offsetting central government expenditure and local government income, with no impact on overall public sector borrowing.

Central government current budget deficit

The central government current budget deficit was £59.9 billion in the FY to October 2026. This was £6.3 billion less than in the FY to October 2025.

The deficit for the FY to October 2026 reflects the gap between £650.0 billion in current receipts and £682.7 billion in current spending, after accounting for £27.2 billion of depreciation.

Central government net investment

Central government net investment was £60.2 billion in the FY to October 2026, £1.9 billion more than in the FY to October 2025.

This included a £13.3 billion payment to the Bank of England Asset Purchase Facility Fund, £0.8 billion less than in the same period last year. These payments are recorded as both central government net investment expenditure and Bank of England receipts, so they have no effect on overall public sector borrowing.

Elsewhere, increases in gross capital formation were partially offset by lower net capital payments to other sectors. Some capital payments, such as those made to local authorities, are public sector borrowing neutral because they are recorded as both central government expenditure and local government income.

Local government and public corporations' borrowing

Initial estimates show that local government borrowed £1.7 billion in the FY to October 2026, £1.1 billion less than in the FY to October 2025. Over the same period, non-financial public corporations recorded a surplus of £0.4 billion, a £1.1 billion smaller surplus than last year.

Data for local government in the current FY are provisional and are currently based on budget data for England, Scotland and Wales, with estimates included for Northern Ireland. Data for non-financial public corporations are highly provisional and largely based on the OBR's Economic and fiscal outlook – March 2026 report. Further information is provided in Section 10: Data sources and quality.

Bank of England

Initial estimates show that the Bank of England recorded a surplus of £8.6 billion in the FY to October 2026, a £2.0 billion larger surplus than in the same period last year. The increase in the surplus mainly reflects lower interest payable to the private sector and the rest of the world.

Data for the Bank of England are currently provisional and based on a combination of published monthly data, available with a one-month lag, and forecasts derived from the latest Bank of England Annual Report and Accounts.

Comparing our financial year to October 2026 borrowing estimates with official forecasts

Public sector borrowing was £3.3 billion higher than forecast in the FY to October 2026 (as published in March 2026), largely reflecting higher-than-expected borrowing by central government and public corporations.

Central government receipts were £10.2 billion higher than forecast. This mainly reflected higher-than-expected receipts from Corporation Tax (£7.0 billion), Income Tax (£5.1 billion) and compulsory social contributions - largely National Insurance contributions - (£4.2 billion). These differences were partially offset by other largely lower-than-forecast receipts, including Stamp Duty which was £1.9 billion below forecast.

Central government spending was £11.4 billion higher than forecast. This mainly reflected higher-than-expected debt interest payable (£5.7 billion), net investment (£3.4 billion) and net social benefit payments, including pensions (£2.6 billion).

Public corporations' data remain largely based on ONS estimates and will be updated as more information becomes available.

Table 8: Comparing financial year to October 2026 estimates with corresponding OBR forecasts

Latest public sector finances estimates compared with the corresponding Office for Budget Responsibility forecast, UK, £ billion

Financial year to October 2026	ONS estimate	OBR forecast	Difference [note 3]
Central government total current receipts	650.0	639.8	10.2
Central government total expenditure	770.1	758.7	11.4
Central government net borrowing	120.1	118.9	1.2
Local government net borrowing	1.7	1.4	0.3
Total public corporations net borrowing [note 4]	-10.4	-12.2	1.8
Public sector net borrowing	111.3	108.0	3.3
Memo item: Public sector current budget deficit	72.9	73.4	-0.5

Source: Public sector finances from the Office for National Statistics

Notes

1. This table uses the Economic and fiscal outlook – March 2026 and the corresponding monthly profiles published in April 2026, as published by the OBR.
2. Year-to-date comparisons offer a more reliable view of overall trends, while monthly figures can be more prone to short-term forecast volatility.
3. Figures may not sum because of rounding.
4. Includes non-financial public corporations, funded public sector pensions and the Bank of England

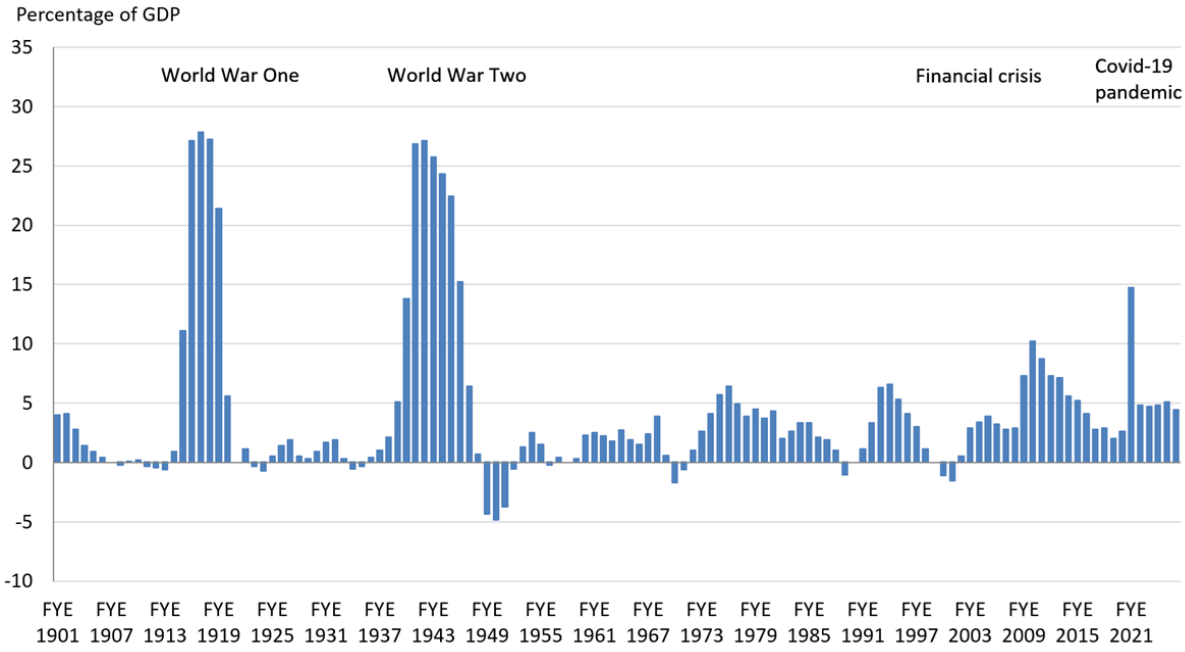

4. Expressing borrowing as a percentage of gross domestic product

Showing borrowing as a percentage of gross domestic product (GDP) puts it in the context of the size of the economy and supports comparisons over time.

The public sector borrowed £134.3 billion in the financial year ending March 2026, equivalent to 4.4% of GDP. This was broadly in line with the Office for Budget Responsibility's forecast of 4.3% of GDP and continued the pattern of borrowing in recent years.

Figure 5: Financial year borrowing has been stable at between 4% and 5% of GDP since the end of the coronavirus (COVID-19) pandemic period

Public sector net borrowing as a percentage of gross domestic product (GDP), UK, financial year ending (FYE) March 1901 to FYE March 2026

Source: Public sector finances from the Office for National Statistics and Office for Budget Responsibility
Notes:
1. Dataset identifier code: -J5IJ.
2. Figures exclude those banks classified to the public sector between October 2007 and May 2024.
3. This chart uses historical data published in the Public finances databank 2025 to 2026.

Borrowing in the financial year to October 2026 was 3.5% of GDP. This was 0.3 percentage points lower than in the same period last year, and the 14th- highest April to October period since comparable monthly records began in 1993.

5. The public sector balance sheet

Borrowing measures the difference between public sector income and spending over a period. Balance sheet measures, including debt, show the public sector's assets and liabilities at a point in time. There are several measures of the public sector balance sheet. The relationship between them is summarised in Table 9 and is discussed in our What the UK government owns and what it owes blog.

Table 9: The public sector balance sheet

Balance sheet measures as at the end of October 2026, £ billion, UK

Classification of assets and liabilities [note 1] [note 2] [note 8]	Central government gilts	General government gross debt	PSND excluding BoE	PSND	PSNFL	Public sector net worth
Total [note 3]	**2,759.7**	**3,233.2**	**2,925.5**	**3,058.3**	**2,696.2**	**-798.1**
Assets: Non-financial						1,898.2
Assets: Illiquid financial [note 4]					1,075.2	1,075.2
Assets: Liquid financial [note 4]			280.0	549.8	549.8	549.8
Liabilities: Currency and deposits		292.0	300.7	1,095.4	1,095.4	1,095.4
Liabilities: Gilts [note 5]	2,759.7	2,759.2	2,715.4	2,299.3	2,299.3	2,299.3
Liabilities: Other debt securities and loans		181.9	189.4	213.4	213.4	213.4
Liabilities: Other financial liabilities [note 6]					713.1	713.1

Source: Public sector finances from the Office for National Statistics and Debt Management Office
Notes:

1. All aggregates are presented on a 2010 European system of national and regional accounts (ESA 2010) basis unless stated otherwise.
2. Consolidation between subsectors means that the size of assets and liabilities, such as gilts, can change as coverage increases.
3. Total equals liabilities less assets except public sector net worth, where total equals assets less liabilities.
4. "Liquid financial assets" mainly consist of foreign exchange reserves and cash deposits. "Illiquid financial assets" include assets such as loans, financial derivatives and other accounts receivable.
5. Gilt liabilities have been adjusted to remove those held by Pool Re which is classified as a central government body.
6. "Other financial liabilities" includes monetary gold and special drawing rights, standardised guarantees, financial derivatives, funded pension liabilities and other accounts payable.
7. Figures may not sum because of rounding.
8. PSND refers to public sector net debt and PSNFL to public sector net financial liabilities.
9. Figures exclude banks classified to the public sector between October 2007 and May 2024.

As a part of its quantitative easing activities, the Bank of England (BoE) purchased central government gilts from the market through the Asset Purchase Facility (APF) Fund. These gilt holdings consolidate within the public sector balance sheet, leaving only the difference between their purchase price and their redemption value.

Subsequent movements in the market value of these consolidated gilt holdings have no effect on the public sector balance sheet. The reserves created by the BoE were subsequently loaned to the APF to purchase these gilts. They remain on the public sector balance sheet as a liability in currency and deposits until the loan is repaid.

We publish an additional presentation of the UK public sector balance sheet in our International Monetary Fund's Government Finance Statistics framework in the public sector finances: Appendix E dataset.

Our Public sector balance sheet tables: Appendix N dataset presents a detailed reconciliation between the balance sheet measures summarised in Table 9.

Public sector net debt

Public sector net debt is a widely quoted balance sheet measure. Expressing net debt as a ratio of gross domestic product (GDP) gives an estimate of its affordability and provides a more consistent measure for comparison of the UK's fiscal position over time.

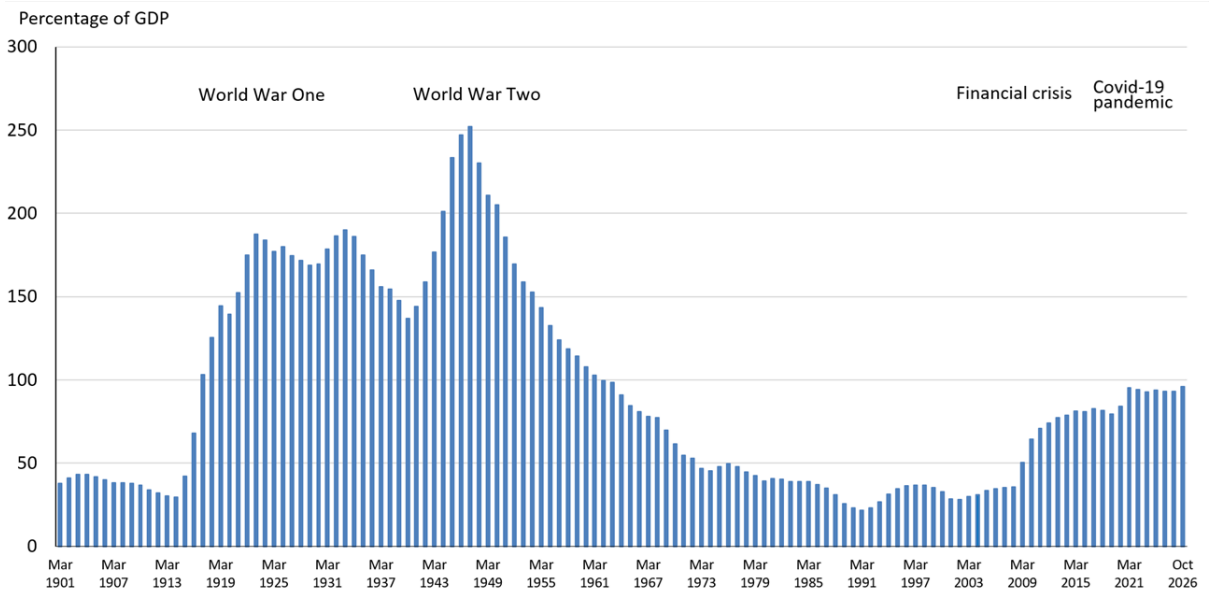

The public sector net debt-to-GDP ratio at the end of October 2026 was provisionally estimated at 95.8%. This was 1.9 percentage points higher than last year and 0.4 percentage points above the Office for Budget Responsibility's (OBR's) March forecast.

The increase in debt-to-GDP ratio reflects that public sector net debt grew faster than current price GDP, compared with October 2025.

Our How the ONS estimates UK debt to GDP figures blog explains why our estimates of the debt-to-GDP ratio are susceptible to revision.

Figure 6: Net debt as a percentage of GDP remains at levels last seen in the early 1960s

Public sector net debt as a percentage of gross domestic product (GDP), UK, financial year ending (FYE) March 1901 to October 2026

Source: Public sector finances from the Office for National Statistics and Office for Budget Responsibility
Notes:
1. Dataset identifier code: HF6X.
2. Figures exclude those banks classified to the public sector between October 2007 and May 2024.
3. This chart uses historical data published in the Public finances databank 2025 to 2026.

Public sector net financial liabilities

Public sector net financial liabilities (PSNFL) is broader than public sector net debt (PSND) because it includes a wider range of financial assets and liabilities.

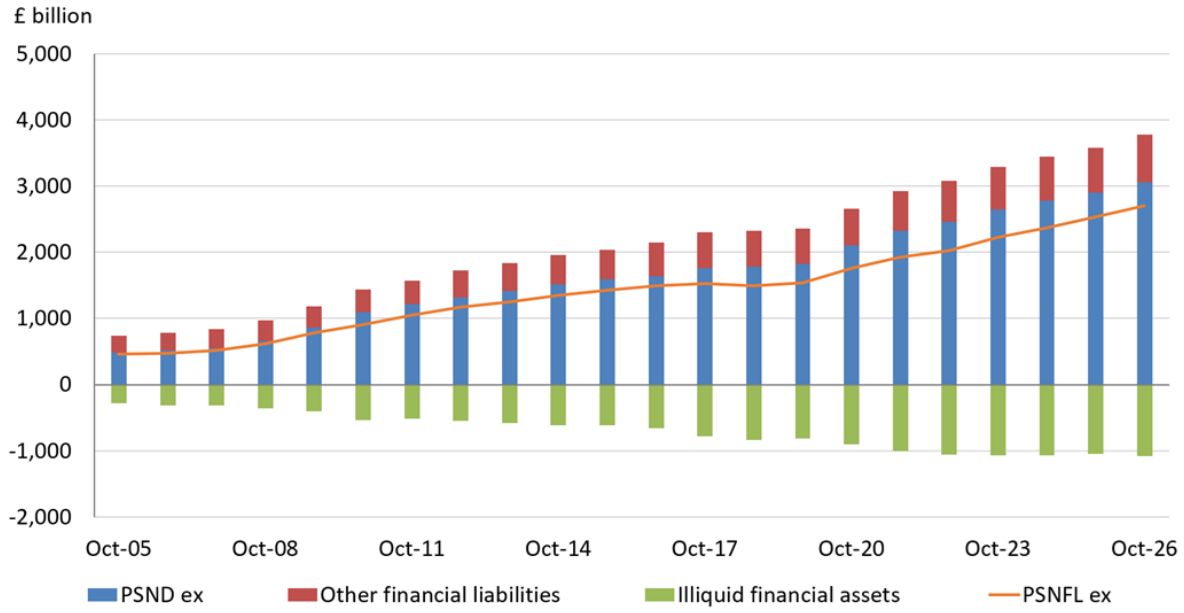

PSNFL was 84.5% of GDP at the end of October 2026; this was 2.4 percentage points higher than at the end of October 2025.

The additional financial assets included in PSNFL were worth more than the additional liabilities. As a result, PSNFL was 11.3 percentage points of GDP lower than PSND at the end of October 2026. We explain the financial assets and liabilities captured in PSNFL in our PSNFL methodology.

Additionally, we published our blog explaining the PSNFL measure, because it has been selected by the UK government as the reference for a balance sheet fiscal rule.

Figure 7: The upward trend in public sector net financial liabilities is largely because of increases in net debt

Public sector net financial liabilities, £ billion, UK, month ending October 2005 to October 2026

Source: Public sector finances from the Office for National Statistics
Notes:
1. Dataset identifier codes: KSE6, JMET, JMEU and CPNF.
2. Figures exclude those banks classified to the public sector between October 2007 and May 2024.
3. PSND abbreviates public sector net debt.
4. PSNFL abbreviates public sector net financial liabilities.

The additional financial assets and liabilities included in PSNFL that fall outside of the PSND boundary are not updated monthly. Instead, they are updated quarterly, or when data become available. These data were last updated on 22 September 2026 and will next be updated on 22 December 2026.

A detailed presentation of PSNFL is available in our PSNFL by subsector: Appendix G dataset, consistent with the 22 September 2026 public sector finances publication.

6. UK fiscal targets

The UK government has legislated for fiscal targets to constrain its management of the public finances. From January 2025, these fiscal targets focus on the public sector current budget deficit and public sector net financial liabilities (PSNFL).

The targets are for the current budget to be in surplus and for PSNFL to fall as a share of gross domestic product (GDP) by the financial year ending (FYE) March 2030. Our latest figures show that:

- the public sector current budget deficit was £47.4 billion in the FYE March 2026; this was £25.9 billion less than in the FYE March 2025
- PSNFL were initially estimated at 81.2% of GDP at the end of March 2026; this was 1.4 percentage points more than at the end of March 2025

7. Revisions

The latest estimates include some data that are initially based on forecasts. As more information becomes available, these estimates are replaced with improved estimates and, later, with outturn data.

Revisions to public sector net borrowing

Public sector finance estimates are revised as improved and more complete source data become available. Revisions are a normal part of the statistical production process and help ensure that published estimates provide the most accurate picture of the public sector's finances.

Since publishing our Public sector finances, UK: September 2026 bulletin, we have reduced our estimate of public sector net borrowing for the financial year (FY) to September 2026 by £3.6 billion, from £97.8 billion to £94.3 billion. The £3.6 billion revision represents 3.7% of the previously published estimate for the FY to September 2026.

Table 10: Revisions to public sector net borrowing by subsector
Public sector net borrowing by subsector compared with the previous publication, UK

	FY to September 2026 (£ billion)	Revision [note 3] (£ billion)	FYE March 2026 (£ billion)	Revision [note 3] (£ billion)
Central government net borrowing	99.3	-3.4	126.6	0.1
Local government net borrowing	0.5	0.0	17.4	0.0
Total public corporations net borrowing	-5.5	-0.1	-9.6	0.0
Of which: non-financial public corporations	-0.2	0.0	-3.5	0.0
Of which: funded public sector pensions	-1.3	0.0	-0.9	0.0
Of which: Bank of England	-4.0	-0.1	-5.2	0.0
Public sector net borrowing	94.3	-3.6	134.3	0.1
Memo item: Public sector current budget deficit	61.0	-3.0	47.4	0.1

Source: Public sector finances from the Office for National Statistics
Notes
1. Figures may not sum because of rounding.
2. Figures exclude those banks classified to the public sector between October 2007 and May 2024.
3. A positive figure indicates that we have increased our previously published estimate; conversely, a negative figure indicates that we have reduced our previous estimate.
4. Public sector finances summary tables: Appendix M dataset compares our latest public sector finances data with those in our Public sector finances, UK: September 2026 bulletin, published on 22 October 2026, in more detail.

Of the £3.6 billion downward revision to borrowing in the FY to September 2026, £3.4 billion relates to central government. This reflects a £2.2 billion increase to our previous estimate of tax receipts, alongside a £1.2 billion decrease in estimated central government expenditure, both following routine monthly data updates.

More detail on revisions to public sector borrowing is available in the Public sector finances summary tables: Appendix M dataset.

Revisions to public sector net debt at the end of September 2026

Since publishing our Public sector finances, UK: September 2026 bulletin, we have revised our estimate of public sector net debt at the end of September 2026 up by £6.4 billion (0.2%), to £3,011.4 billion. The increase largely reflects updated estimates for non-financial public corporations (£3.0 billion) and the Bank of England (BoE) (£3.3 billion).

Our estimates for non-financial public corporations are based on data from the quarterly national accounts. This month, we have incorporated late data from the September national accounts dataset that were not available in time for the public sector finances publication.

Some BoE data used to estimate public sector net debt are reported with a one-month lag and are initially estimated. As a result, revisions can occur when more complete data become available.

Revisions to public sector net debt as a percentage of GDP

Since publishing our Public sector finances, UK: September 2026 bulletin, we have revised our estimate of public sector net debt as a proportion of gross domestic product (GDP) at the end of September 2026 up by 0.6 percentage points, to 94.6%.

This increase reflects both an upward revision to our estimate of net debt and updated monthly GDP estimates, incorporating data from the Office for Budget Responsibility's (OBR's) Economic and fiscal outlook – October 2026 report and our GDP first quarterly estimate, UK: July to September 2026 publication.

The updated OBR forecast had the larger effect on the revision to the debt-to-GDP ratio.

Local government quality adjustments

Local authority budgets do not always match spending later reported in audited accounts. In recent years, budget data have tended to underestimate current expenditure.

We adjust budget-based estimates where evidence suggests that they are unlikely to reflect final outturns. This improves the quality of early estimates and reduces avoidable revisions.

For the financial year ending (FYE) March 2027, these adjustments include:

- a £4.0 billion upward adjustment to England's current expenditure
- a £2.4 billion upward adjustment to Scotland's current expenditure

For the FYE March 2026, these adjustments include:

- a £5.0 billion upward adjustment to England's current expenditure
- a £2.4 billion upward adjustment to Scotland's current expenditure

To reflect the latest available information on housing benefit expenditure, we have also applied downward adjustments of £2.7 billion in the FYE March 2026 and £2.3 billion in the FYE March 2027.

8. Data on public sector finances

Public sector finances tables 1 to 10: Appendix A
Dataset | Released 20 November 2026
The data underlying the public sector finances statistical bulletin are presented in the tables PSA 1 to 10.

Public sector current receipts: Appendix D
Dataset | Released 20 November 2026
A breakdown of UK public sector income by latest month, financial year-to-date and full financial year, with comparisons with the same period in the previous financial year.

Public sector finances summary tables: Appendix M
Dataset | Released 20 November 2026
The latest public sector net borrowing by subsector and a summary of central government receipts and expenditure data.

Public sector balance sheet tables: Appendix N
Dataset | Released 20 November 2026
A reconciliation of the latest public sector balance sheet measures.

Public sector finances borrowing by subsector: Appendix R
Dataset | Released 20 November 2026
Public sector finances analytical tables (PSAT) showing transactions related to borrowing by subsector. Total Managed Expenditure (TME) is also provided.

Public sector net financial liabilities by subsector: Appendix G
Dataset | Released 22 September 2026
A reconciliation of public sector net borrowing and movements in net financial liabilities.

International Monetary Fund's Government Finance Statistics framework in the public sector finances: Appendix E
Dataset | Released 22 September 2026
Presents the balance sheet, statement of operations, and statement of other economic flows for the public sector, compliant with the Government Finance Statistics Manual 2014: GFSM 2014 presentation. Updated quarterly, depending on the availability of data.

Public sector net worth: Appendix O
Dataset | Released 22 September 2026
Presents the balance sheet for the public sector, consistent with the 2010 European system of national and regional accounts (ESA 2010), and Eurostat's Manual on Government Deficit and Debt (MGDD). Updated quarterly, depending on the availability of data.

9. Glossary

Central government net cash requirement

The central government net cash requirement is the cash the government must raise from financial markets to finance its activities. It reflects the timing of payments and receipts rather than when liabilities arise.

Public sector

The UK public sector comprises six subsectors: central government, local government, public non-financial corporations, public sector-funded pensions, the Bank of England (BoE), and public financial corporations.

Figures in this release exclude public sector banks, following the reclassification of NatWest Group to the private sector in May 2024.

Public sector current budget deficit

Public sector current budget deficit is the difference between current expenditure and receipts, after accounting for depreciation. It measures the borrowing needed to fund the costs of day-to-day public services, welfare and administration, and is the reference statistic for a UK government fiscal rule. Positive numbers indicate a deficit, while negative numbers indicate a surplus.

Both current budget deficit and borrowing are recorded on an accrual basis, that is, income when earned and spending when incurred, rather than when cash is paid.

Public sector net borrowing

Public sector net borrowing (often referred to as the deficit) is the difference between total expenditure and receipts. Positive numbers indicate a deficit, while negative numbers indicate a surplus.

Public sector net debt

Public sector net debt (often referred to as the national debt) measures the public sector's liabilities to the private sector and overseas, net of its liquid financial assets.

Public sector net financial liabilities

Public sector net financial liabilities (sometimes referred to as net financial debt) is a broader balance sheet measure than net debt, capturing all financial assets and liabilities recognised in the national accounts.

PSNFL is the reference statistic for a UK government fiscal rule.

Public sector net worth

Adding non-financial assets to PSNFL results in public sector net worth, the widest measure of the public sector balance sheet.

10. Data sources and quality

About the statistics

Economic statistics classifications and developments in public sector finances: October 2026
Article | Released 20 November 2026
Includes the latest economic statistics classification updates and information on future developments to the public sector finance statistics.

Pensions in the public sector finances: a methodological guide
Methodology | Released 4 December 2024
Explains the methods and data sources we use to record pensions in fiscal statistics.

Monthly statistics on the public sector finances: a methodological guide
Methodology | Released 4 October 2023
This methodological guide provides comprehensive contextual and methodological information on the monthly public sector finances (PSF) statistical bulletin, which is jointly produced by the Office for National Statistics (ONS) and HM Treasury (HMT).

Public sector finances quality and methodology information (QMI)
Methodology | Released 4 October 2023
Quality and methodology information for the UK public sector finances and government deficit and debt under the Maastricht Treaty, detailing the strengths and limitations of the data, methods used, and data uses and users.

Student loans in the public sector finances: a methodological guide
Methodology | Released 22 January 2020
Explains the methods we will use to partition student loans into government expenditure and a financial transaction.

About our data sources

Calculation of interest payable on government gilts
Methodology | Released 18 July 2022
Explains the recording of interest payable to holders of UK government gilts in the UK public sector finances.

The use of gross domestic product (GDP) in public sector fiscal ratio statistics
Methodology | Released 21 September 2016
Explains the methodology used for the presentation of GDP ratios in the UK PSF publication.

How the ONS estimates UK debt to GDP figures
Blog | Released 21 July 2023
Explains the methodology used for the presentation of GDP ratios in the UK PSF publication and in particular for the public sector net debt where a centred approach (requiring forecasts) is used.

International reporting standards

All aggregates in this bulletin are reported in accordance with the 2010 European system of national and regional accounts (ESA 2010) (PDF, 6.4MB) (opens in new tab), unless otherwise stated.

Statistical designation

The Office for Statistics Regulation (OSR) independently reviewed the public sector net borrowing, cash requirement, and debt statistics in July 2017, concluding that they comply with the standards of trustworthiness, quality, and value in the Code of Practice for Statistics and should be labelled accredited official statistics.

The public sector net financial liabilities and public sector net financial worth statistics are both official statistics. These measures were introduced after July 2017, so have not yet been reviewed by the OSR. The public sector net worth statistics are labelled as official statistics in development. They are based on information from public sector finance and non-financial assets data estimated by the ONS when compiling the National Balance Sheet statistics.

Local government data quality

Local government estimates for the financial year ending (FYE) March 2027 remain provisional. They are primarily based on quality-adjusted local authority budget data for England, Scotland and Wales, alongside estimates for Northern Ireland.

For FYE March 2026, estimates of current expenditure also remain provisional and continue to rely largely on quality-adjusted local authority budget data for England, Scotland and Wales. Estimates of capital expenditure and receipts for England have been updated using provisional outturn data, while estimates for Scotland and Wales continue to be based on budget data. Figures for Northern Ireland remain estimated.

For FYE March 2025, estimates of current expenditure for local authorities in England are based on published third-release outturn data, while estimates of capital expenditure and receipts are based on published final outturn data. Estimates for Scotland and Wales are based on published outturn data, and those for Northern Ireland are based on final returned data.

Public corporations' data quality

Public corporations' data for the current financial year are highly provisional estimates for the UK. They are largely based on the Office for Budget Responsibility's (OBR's) Economic and fiscal outlook – March 2026 report. Estimates for the FYEs March 2025 and March 2026 remain largely based on the OBR's Economic and fiscal outlook – November 2025 report. This was supplemented by in-year data for train-operating companies, the Housing Revenue Account, and surveyed public corporations.

Bank of England data quality

As part of our ongoing quality assurance, we are reviewing how we calculate the Bank of England's net cash requirement. We will introduce any improvements identified by the review at the earliest opportunity.

1 GDP denominator 12 month moving total to period
2 GDP denominator 12 month centred moving total around period
3 BoE abbreviates Bank of England
4 Time series only available back to 2000 Q1 with "-" denoting no data
5 "-" denotes zero value for that period

PSA6A Net borrowing summary: month and year-to-date comparisons

Notes:

1 Unless otherwise stated
2 Current Budget Deficit is the difference between current expenditure and current receipts
3 Net Investment is investment less depreciation
4 Net Borrowing is Current Budget Deficit plus Net Investment
5 APF - Bank of England Asset Purchase Facility
6 SLS - Special Liquidity Scheme
7 Nominal GDP in the 12 months ending at each month
8 Nominal GDP in the 12 months centred on each month
9 Change measured in percentage points
10 Funded pensions only
11 Mainly national insurance contributions (NICs)
12 Includes current expenditure,net investment and depreciation
13 The first capital transfer from central government to APF occurred in October 2022.

Relationship between columns 3=4+5+6 ; 7=8+9+10+11 ; 12=1+2+3+7

1 Includes net increase in inventories and valuables.

2 Includes Housing Revenue Account reform in Mar 2012.

3 The large capital transfers in 2008/09 arise from movements associated with depositor compensation payments by FSCS and HMT.

4 Includes transfer of Royal Mail pension plan assets in April 2012 and movements associated with depositor compensation payments by FSCS and HMT in 2008/09.

5 Includes capital transfers to Lloyds Banking Group and Royal Bank of Scotland associated with equity purchases.

6 APF = Asset Purchase Facility. The first capital transfer to the APF occurred in October 2022.

7 Includes Housing Revenue Account reform in Mar 2012, transfer of Royal Mail pension plan assets in April 2012 and movements associated with depositor compensation payments by FSCS and HMT in 2008/09.

Relationships between columns 1+3+4=5 ; 2+3+4=6 ; 6+7+8=5

1 NRAM = Northern Rock Asset Management, B&B = Bradford and Bingley.

2 NCR = Net Cash Requirement

3 Does not include Net Cash Requirement to Central Government

4 Negative NCR reflects change in financing as from 2014/15 new financing requirements of Network Rail were met through core central government borrowing and are therefore included in main CGNCR.

PSA7D Central Government Net Cash Requirement on own account (receipts and outlays on a cash basis)

£ million

Relationship between columns 14=1+2+3+4+5+6+7+8+9+10+11+12+13

1 Excluding Northern Rock Asset Management (NRAM), Bradford & Bingley (B&B) and Network Rail (NR) - although cash flows relating to NRAM and B&B are included from October 2014 and for NR from April 2015

2 All adjustments reflect differences between when, and at what value, liabilities and assets are scored in net debt and their related cash flows

3 Includes gilts that are transferred to central government (such as those previously held by the Royal Mail Pension Plan) as well as timing differences where cash flows and debt movements were recorded in adjacent months

4 Includes the impact of imputed finance leases as well as the reclassifications of London Continental Railway and the reorganisation of the Housing Revenue Account

5 When an index-linked gilt is redeemed, the impact will always be negative which can cause MW7L to be negative.

Column relationships 1+2+3+4+5+6+7-8-9=10

1 Bank of England comprises Banking Department and Issue Department. Banking Department plus Issue Department assets and liabilities measured after consolidation of Issue Department deposit held at Banking Department.

2 From September 2021 this is calculated using APF purchase of gilts (YWWB9T9) plus APF purchase of corporate bonds (YWWZJ5J).

3 From September 2021 APF gilt purchases are sourced directly from BoE website (YWWB9T9).

4 Includes BoE's temporary purchases of long-dated UK government conducted between 28 September and 14 October 2022.

5 Up to the 19th January 2019, Term Funding Scheme was within the APF. From 19th January 2019, TFS was transferred to the BoE balance sheet.

6 These series can be derived from the BoE Annual Report and Accounts covering both the Banking and Issue Department liabilities and assets.

7 Includes: insurance, pension, standardised guarantee schemes and other accounts receivable/payable.

8 Gilts are recorded at face (or redemption) value in this presentation.

9 Consolidation of gilts issued by central government but held by Banking & Issue Department of BoE.

10 Consolidation of the loan to the BoE Asset Purchase Facility Fund (BEAPFF).

11 Comprised of Ways and Means advance to the National Loans Fund and the loan to the CCFF granted in April 2020 and fully repaid in March 2022.

12 HM Treasury estimates based on management information. Estimates for February 2015 to February 2016 based on annual report data only.

13 Term Funding Scheme (SME) is the TFS with additional incentives for small and medium-sized enterprises which started 15th April 2020.

1 ONS estimates of the interest received by APF from central government, largely on its gilt holdings.
2 ONS estimates of the interest paid by APF to Bank of England on the loan. Calculated using the Bank of England base rate. From December 2025 the base rate has been set at 3.75 percent.
3 Dividends paid to HM Treasury consolidate between the central government and Bank of England and so are public sector borrowing neutral.
4 The full cash transfers (series MT6A and MF7A) will impact the net cash requirement measure by the total amounts.

Worksheet PSA10: Public sector transactions by sub-sector and economic category, UK, not seasonally adjusted

This worksheet contains one table.

Some cells in this table are black indicating that some transactions do not exist in all subsectors

Time period covered by this presentation April 2025 to March 2026

Transactions	**Central government (£ million)**	**Local government (£ million)**	**General government (£ million)**	**Public corporations (£ million)**	**Public sector funded pension schemes (£ million)**	**Bank of England (£ million) [note 6]**	**Public sector excluding public sector banks (£ million)**	**Public sector banks (£ million) [note 129]**	**Public sector including public sector banks (£ million)**
